

# Take productivity to the next level with an AI PC

intel  
CORE  
ULTRA

The future of computing takes flight with AI-infused applications across the user and IT domains. With the arrival of the AI PC, some traditionally cloud-based workloads now shift to local compute on the PC.

Extending AI to the PC opens new opportunities to better respond to IT and user needs by integrating AI into apps that use any combination of cloud, client, and hybrid models.

**54%** of global mobility decision-makers say **flexibility to handle present and future AI demands** is a key benefit of edge computing<sup>1</sup>

## What is the AI PC?

A PC with the latest Intel® Core™ Ultra processor that brings fresh AI experiences in productivity, creativity, and security through a combination of the CPU, GPU, and the all-new NPU.

## What End Users can do with AI

## What IT Managers can do with AI

It's not only end users who benefit. According to Gartner®, Artificial Intelligence for IT Operations (AIOps) has the potential to revolutionize the way IT teams work. By effectively harnessing the power of AI, an AIOps platform can empower organizations to automate tasks, streamline operations, and boost efficiency in unprecedented ways.<sup>7</sup>

With the introduction of the AI PC, Intel is working to accelerate AI for IT, helping ITDMs transform their IT operations from reactive to predictive, proactive, and even automated operations.

Recent projections show the value of these capabilities will propel the AIOps market to **27%** year-over-year growth annually from 2023 to 2032<sup>9</sup>

## Why Intel® Core™ Ultra Processors?

The right balance of power and performance for AI

CPU	<b>Fast Response</b> Ideal for lightweight, single-inference, low-latency AI tasks
GPU	<b>Performance Parallelism &amp; Throughput</b> Ideal for AI infused in Media/3D/Render pipeline
NPU	<b>Dedicated Low-Power AI Engine</b> Ideal for sustained AI and AI offload

### Run your AI workloads on a machine hardened for security

By design, Intel® Core™ Ultra processors and Intel vPro® provide a more secure foundation for modern computing and AI.

Intel provides foundational protections for AI models and their data throughout the entire computing process.

Get longer battery life with **up to 40%** lower processor power for AI enhanced collaboration<sup>10</sup>

### Killer app is "choice"

100+ AI-enhanced apps/features

### Four AI frameworks

ONNX, OpenVINO, DirectML, Web Neural Network API

## How to bring AI PCs to Your Environment

**Choose AI PCs** with integrated AI engines across CPU/GPU/NPU to enable better productivity, collaboration, media creation and much more.

**Get the most** out of your Windows 11 migration by investing in AI PCs with Intel® Core™ Ultra featuring Intel vPro® technology.

**Have peace of mind** with a secure foundation by design and manageability features that enable the next wave of services-ready endpoints.

More than **100M** processors with AI accelerators through 2025

As measured by SoC package power using XSplit VCam for background removal, auto framing, enhanced lighting, chair removal using Intel Core Ultra 7165H vs. Intel Core i7-1370P. Performance varies by use, configuration, and other factors. Learn more at [www.intel.com/performanceindex](https://www.intel.com/performanceindex). Intel technologies may require enabled hardware, software or service activation. Built into the hardware, Intel® Thread Director is provided only in performance hybrid architecture configurations of 12th Gen or newer Intel® Core™ processors; OS enablement is required. Available features and functionality vary by OS. Performance hybrid architecture combines two core microarchitectures, Performance-cores (P-cores) and Efficient-cores (E-cores), on a single processor die first introduced on 12th Gen Intel® Core™ processors. Select 12th Gen and newer Intel® Core™ processors do not have performance hybrid architecture, only P-cores or E-cores, and may have the same cache size. See [ark.intel.com](https://ark.intel.com) for SKU details, including cache size and core frequency. All versions of the Intel vPro® platform require an eligible Intel processor, a supported operating system, Intel LAN and/or WLAN silicon, firmware enhancements, and other hardware and software necessary to deliver the manageability use cases, security features, system performance, and stability that define the platform. See [www.intel.com/PerformanceIndex/vPro](https://www.intel.com/PerformanceIndex/vPro) for details. Intel is committed to the continued development of its renewable, sustainable, and green networks, as we strive to prioritize greenhouse gas reduction.
