

Triple Blitz 2025 – M1 Task 1 - 5 Key Updates You Need to Know Since Last Half – VO Script

Welcome to Triple Blitz 2025! Let's take a quick look at 5 key updates from Intel and Microsoft since last half to set the stage for a successful half with your customers.

#1 - Windows 10 End-of-Support Approaches!

October 14th 2025, marks the end of Windows 10 support—and now is the moment to help your customers make the move to Windows 11. With enhanced security, productivity, and reliability, Windows 11 is an essential upgrade that can also deliver economic benefits.

Microsoft 365 apps will no longer be supported after the Windows 10 end-of-service date. While these apps will still function, they won't receive updates or support, creating potential security risks. Upgrading to Windows 11 ensures your customers stay protected and productive.

Expect tailored training and resources this half to help you show customers the full value of the Windows 11 refresh and make the transition seamless.

#2 - Intel's Lunar Lake Goes Commercial

The most powerful AI PC on the market is here. Intel Core Ultra 200V processors — code named Lunar Lake — bring cutting-edge AI capabilities to ultra-thin, lightweight laptops, redefining productivity and efficiency.

With an integrated NPU, GPU, and CPU delivering up to 120 TOPS of AI compute power, Lunar Lake makes advanced workflows and multitasking effortless. Businesses can count on industry-leading battery life, enhanced fleet manageability with Intel vPro, and silicon-based protection against modern cyber threats.

Lunar Lake is redefining what's possible in the AI PC era, giving your customers the tools they need to work smarter, stay secure, and achieve more.

#3 - Intel Unveils Arrow Lake Processors

Intel has unveiled its Arrow Lake processors, the Intel Core Ultra 200S series, bringing new levels of power and efficiency to high-performance computing. Designed for ultra-portable devices and powerhouse laptops alike, these processors combine advanced AI workflows with exceptional energy efficiency to meet evolving customer needs.

With systems expected to ship later in Q1, Arrow Lake processors are poised to deliver groundbreaking performance, reduced power consumption, and next-generation computing experiences for your customers.

#4 - New Windows 11 Experiences

Windows 11 just got even better with new features designed to boost productivity and simplify workflows. The Recall feature makes it easy for users to pick up right where they left off by reopening apps and documents from previous sessions. Click to Do takes multitasking to a new level with intelligent overlays that suggest actions like summarizing text or performing visual searches. And with the improved AI-powered Windows Search, finding files, settings, or information is faster and more intuitive than ever.

With these game-changing updates and Windows 11's powerhouse productivity, security, and management tools, there's never been a better time for your customers to upgrade.

#5 - Microsoft 365 Introduces Copilot Wave 2 Features

Microsoft has rolled out Copilot Wave 2, bringing AI-powered enhancements to streamline workflows and elevate productivity across Microsoft 365 applications. Key updates include Copilot Pages, an interactive workspace for organizing and sharing project information, and new features in Teams that provide actionable meeting insights and improve collaboration.

With additional advancements in Word and Outlook—like automated scheduling and content generation—these tools are built to save time and deliver real business impact. Exclusively on Windows 11, these updates give your customers a head start to unlock the full potential of Microsoft 365 before Windows 10 end-of-support in October 2025.
